

A Building That Breathes

Ceramic Tile for
Healthy Buildings:
A Free CEU Presented
by the Tile of Spain

tile of spain®

TileofSpainUSA.com

Yes it's possible! Sustainable solutions today include tiles that not only clean themselves, but the air around them; tiles that are warm to the touch while minimizing the need for heating or cooling a space; integrated photovoltaics for onsite renewable energy; raised floor & chambered wall systems that create a user-defined, reactive environment and reactive glazes that can change color or act as a switch for utilities.

Ceramic tile, especially when spaces are designed with the material in mind, presents a truly sustainable solution for high efficiency buildings today and in the future.

Tile of Spain manufacturers have been at the forefront of innovation in the industry for decades and continues

to bring revolutionary material to market every year. Ceramic tile not only offers benefits that fit within the current framework of green design in North America, but, allow for design professionals to embrace progressive solutions that will raise the bar on what constitutes a "green" material choice.

The new renaissance of ceramics has arrived! Rethink what you previously thought possible. Generations of experience and a spirit of unbridled creativity bring quality and innovation in equal measures to this ancient material.

So learn and earn today! It's never been easier, with fresh approaches and the hottest trends just a click away.
